① The booster seat can be used on a flat surfaced floor or on a chair. Place the booster on an adult chair with four legs and a backrest (do not use on a round seat, stool or folding chair).

② Buckle the chair back straps together. You will hear a 'click' when the buckle locks.

③ Buckle the chair bottom straps together. You will hear a 'click' when the buckle locks.

④ Adjust the straps by pulling the strap end and moving the slider to tighten until smooth.

⑤ Place your child in the seat. To secure the harness attach the straps from both sides. You will hear a 'click' when the buckle locks. To unlock, press the button in the middle.

⑥ Adjust the straps by pulling the strap end and moving the slider to tighten. It needs to be tense enough to secure your child but not so tight that your child is uncomfortable and unable to move. As a rule of thumb, you should be able to fit two fingers.

⑦ The booster seat has a removable tray. There are three points to lock the tray in place; one on each side and one in the centre. Turn each latch to lock in place.
